RESULT 32
US-09-248-796A-24931
Sequence 24931, Application US/09248796A
Fatent No. 6747137
GENERAL INFORMATION:
FAPLICATORY: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS.
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: WORDER: US/09/248,796A
TITLE OF INVENTION NUMBER: US 60/074,725
FRIOR PELING DATE: 1999-02-12
FRIOR PELING DATE: 1998-02-13
FRIOR PILING DATE: 1998-06-13
FRIOR FILING DATE: 1998-08-13
WUMBER OF SEQ ID NOS: 28208
SEQ ID NO 2431
LENGTH: 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Patent No. 6551795
GENERAL INFORMATION: BOUCHEL BALL
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR PAPLICATION NUMBER: US 60/094,190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Sequence 1285, Application US/09471276
Patent No. 6622072
Patent No. 6622072
APPLICANT: UnrorMATION:
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
Patent No. 6822072
FILE REPERENCE: GENSET.025CP1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3; Indels

Patent No. 678361

APPLICANT: Ducas Milne Edwards, J.B.

APPLICANT: Duclert, J.Y.

APPLICANT: Glordano, J.Y.

TITE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

PATENTE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

PILE REFERENCE: 59.042.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 2000-02-24

PRIOR FILING DATE: 1999-02-26

PRIOR FILING DATE: 1999-02-26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
